

Education

King Mongkut's Institute of Technology Ladkrabang Ladkrabang, Bangkok
• Bachelor of Science Degree, School of Information Technology. Studying Software Engineering Track. GPA 3.68 Studying 4th year.

Experiences

Agoda (Fullstack Software Engineer, Intern, Part-time) June 2025 – Dec 2025

- Led per-feature design review sessions with 10-30 cross-functional stakeholders (directors, engineering managers, product owners, system maintainers), presenting API design proposals and frontend architecture for partner extranet convergence initiative
- Migrated 5 high-traffic partner extranet pages (thousands of daily users) from legacy monolith to microservices architecture (React, C# .NET), conducting legacy system research and designing solutions such as property-type-based dynamic form field configuration
- Established comprehensive testing diamond: unit tests for utilities, contract tests for inter-service communication with third-party microservices, and end-to-end acceptance tests validating complete user journeys in production-like environments
- Built and deployed multi-region BFF layer with global datacenter distribution, optimizing for minimal latency across geographically distributed hotel partner base
- Incorporated stakeholder feedback to refine designs, including discovering and migrating to newer API endpoints identified through collaborative review process

Cleverse (Software Engineer, Intern, Part-time) April 2024 – Feb 2025

- Architected Bitcoin wallet authentication library supporting 4 major providers (Unisat, Xverse, Leather, OKX), creating unified adapter pattern for signature-based user authentication across multiple Web3 applications
- Developed NFT launch platform on Bitcoin generating ten thousands dollars in first-round investment with full sellout, integrating Mempool API for transaction management and investor verification
- Built CAT-20 token minting interface for time-sensitive meme NFT campaign, delivering production-ready solution under tight deadlines
- Contributed core DEX features (liquidity pool management, token swapping) for Mantle chain deployment, implementing Uniswap V2/V3 fork architecture
- Extended smart money tracking platform from Ethereum to Solana, implementing wallet profile analytics and transaction history visualization for 20K+ user base

School of Information Technology, KMITL (Teaching Assistant) July 2023 – Feb 2024

- Mentored 100+ students across multiple computer science courses including Problem Solving (Python), Object-Oriented Programming (Java), and IT Fundamentals (Git, Linux)
- Improved student comprehension through hands-on coding sessions and personalized guidance

Projects

KMITL Curriculum Website (Leads Fullstack Engineer) https://curriculum.kmitl.ac.th April 2025 – May 2025

- Led 1-month development of university curriculum platform (100+ programs) with Astro and PayloadCMS, managing junior developer on WordPress migration and presenting to institutional directors
- Resolved SSR integration challenges between Payload API client and Astro's build environment

ITKMITL TCAS (System Maintainer) https://tcas.it.kmitl.ac.th Sep 2023 – Aug 2025

- Rescued non-operational admissions platform (500+ students) by delivering emergency Svelte rewrite in 2-4 weeks, eliminating 6+ years of technical debt (Vue 2, Node 12, Sequelize)
- Iteratively modernized to Next.js with hybrid SSR/CSR and Prisma ORM; built staff portal for application review and applicant management

Little Patient (Project Manager, Full stack developer) Apr 2021 – Jan 2022

- Built 3D medical simulation game for senior medical students (Siriraj partnership), finalist in 24th National Software Contest

Leadership & Activities

IT Experience Club (Vice-President) July 2023 – Feb 2024

- Organized technology workshops for 200+ students including Python project-building workshops for first-year students

Junior Webmaster Camp 13 (Programming Class Teaching Director, Frontend Developer) https://13.jwc.in.th/ July 2024

- Instructed 48 selected high school students in advanced fullstack development and developer-designer collaboration.
- Led frontend development team and created interactive camp website with engaging user experience

Young Webmaster Camp 19: Selected as 1 of 20 participants from 371 applicants July 2023

ToBeIT'67 Camp: Taught web development (SvelteKit, Express.js, JavaScript) to 1,000+ students Oct-Nov 2023

Sairahut IT20: Led development team for faculty event with 250 peak concurrent users July-Aug 2023

Technical Skills

Languages: TypeScript, JavaScript, C++, C#, Python, Java, Go, SQL	Backend: Node.js, Express, Nest.js, .NET, tRPC, Django, Prisma ORM	Infrastructure: Docker, Git, Linux, Multi-datacenter deployment, Microservices architecture
Frontend: React, Next.js, SvelteKit, Svelte, Astro, HTML5, CSS3, Tailwind CSS	Databases: PostgreSQL, MySQL, MSSQL, MongoDB, Cassandra	Web3: Bitcoin wallet integration, DeFi protocols, Smart contract interaction, Web3.js/Ethers.js
